Front End Components

Tie Rod and Drag Link Kits: We carry a full line of tie rod and drag link kits in polished stainless or plain steel. They are 11/16"-18 right and left hand (Ford) threads that offer a $\pm 3/8"$ of adjustment and cut extra deep so they can be shortened 1/4" if necessary. The kits come with top of the line permanently lubed rod ends, jam nuts, S/S cotter pins and black dust covers. We also offer tie rods and drag links without ends in polished stainless or plain steel.

Special Order Tie Rods and Drag Links: Custom length 11/16"-18 threaded tie rods and drag links are available in both polished stainless or plain steel. Please have your center to center measurements ready when ordering and your rod end requirements, if any.

Note: Use fig. 1 to determine the best tie rod or drag link, center to center measurement for your application.
