# Misc. parts and accessories

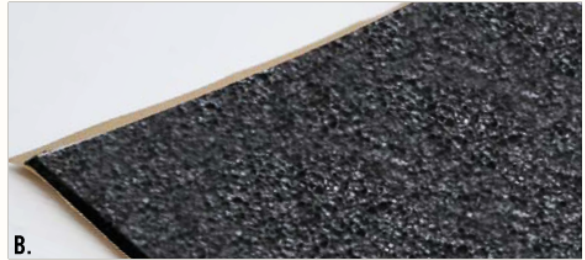

**Dynamat Insulation:** We use one brand of insulation and that is Dynamat. To make it easy our car shop has narrowed down the Dynamat product line to two that work for them. They are Xtreme Dynamat sound deadener and Dynaliner heat insulator. Xtreme is a lightweight, elastomeric, butyl and aluminum constrained vibrational damper while Dynaliner is the perfect ultra lightweight weight heat insulator made of a single layer synthetic foam-type material to use on top of Xtreme Dynamat in places such as floors, roofs, fire walls and doors. The combination offers the best of both worlds... quiet and cool.

Xtreme comes in a box of 9, 1/16" thick 18" X 32" sheets (36 sq/ft) which is enough material to insulate an entire car. Dynaliner comes in a single 1/4" thick 32" X 54" sheet (12 sq/ft) so you'll need 3 sheets to do an entire car. It's simple to install as the product is easily cut with scissors and molds to the contours of your vehicles interior using peel-n-stick pressure sensitive adhesive. Over time we have found no substitute for Dynamat, it is an extremely durable and efficient product.

- (A) #030-10455 Xtreme sound deadener: \$209.95 per box
- (B) #030-11102 Dynaliner heat insulator: \$97.95 sheet

A.  
Xtreme Dynamat sound deadener

B.  
Dynaliner heat insulator

## Vintage Air:

The SO-CAL Speed Shops carry a full line of Vintage Air A/C and heater components. At our Pomona, Ca headquarters we install Vintage Air systems exclusively, call for an estimate or to discuss your needs.
